PERSONAL STATEMENT

I am a hard worker and enthusiastic about challenging work. I have strong personal motivation and able to communicate with all people levels. I am quick learning new things, adaptable to new environments and open toward differences, and love working as a team.

PERSONAL DETAIL

Date of Birth	: July 27 th 1998
Gender	: Male

WORKING EXPERIENCE

Software QA Engineer at Paydia – PT. Data Cell Infomedia

April 2023 - Present

1. Test Planning and Design : Responsible for planning and designing testing strategies to ensure that the software or system developed meets functional and non-functional requirements. They collaborate with software development teams and other stakeholders to identify test scenarios, create test plans, and design comprehensive test cases.
2. Test Execution : Responsible for carrying out software testing which includes functional testing, integration testing, performance testing, and security testing. They use proper testing techniques and tools to evaluate the quality and reliability of the fintech system. The SQA Engineer also performs debugging, tracks and reports bugs or problems found during testing, and coordinates with the development team for problem solving.
3. Quality Assurance : Responsible for ensuring that established testing standards and procedures are strictly followed. They conduct audits of code, design, and project documents to ensure compliance with standards and best practices in the fintech industry. The SQA Engineer also monitors and evaluates the quality of the product or system as a whole to ensure the fulfillment of business requirements and user satisfaction.
4. Test Automation : Play a role in developing and implementing test automation scripts to improve test efficiency and accuracy. They use relevant tools and technologies to automate routine testing, regression testing, and load testing.
5. Team Collaboration : Liaise with software development teams, project management, business stakeholders and operations teams to ensure a clear understanding of test requirements and business goals to be achieved. They also communicate effectively to report test findings, problems and test status to all relevant parties.
6. Process Improvement : Constantly working to improve testing processes and development practices by introducing new methods, tools, and technologies that can improve the efficiency, quality, and reliability of software in the fintech industry.
